

OCI Architecture Studio

A simple, evidence-backed assistant for reviewing OCI architecture decisions.

Presenter message

It helps teams move from a question to a reviewable OCI recommendation with citations.

OCI GenAI

Oracle Vector

Citations

Rollback Ready

Why We Built It

Architecture reviews need speed, consistency, and evidence.

Before

Manual lookup
Inconsistent answers
Hard to trace evidence

With Studio

One review flow
Grounded OCI context
Citations and risks

Outcome

Faster first pass
Cleaner team discussion
Rollback-safe operations

The goal is not to replace architects. It gives architects a better starting point.

How The Flow Works

Retrieve OCI evidence first, then synthesize a structured answer.

Simple explanation

It follows a RAG pattern: retrieve relevant OCI knowledge, use that evidence in the prompt, then generate a structured recommendation.

What Is Live In Staging

The current runtime is OCI-native, with simple rollback switches.

Synthesis	OCI GenAI	xai.grok-4.3
Retrieval	Oracle AI Vector Search	OCI_ARCHITECTURE_CHUNKS_V4
Embeddings	OCI GenAI	cohere.embed-v4.0 / 1536 dims
Rollback	Config-only	deterministic + Object Storage/local
Audience answer	No, it is not hardcoded. The format is controlled; the content depends on the prompt, retrieved OCI evidence, and GenAI synthesis.	

Demo Script

Use one prompt and keep the walkthrough focused.

Prompt

How should I deploy a stateless web app on OCI?

1

Submit prompt

2

**Show summary and
recommendations**

3

**Show risks and
tradeoffs**

4

Click a citation

5

**Refine from the
pinned top box**

Keep the demo under three minutes. The value is clarity, evidence, and iteration.

Safety And Next Steps

Useful today, with clear controls for what comes next.

Safety controls

- deterministic synthesis rollback
- Object Storage retrieval rollback
- local hash embedding rollback
- health and retrieval guardrails
- evals before material changes

Next steps

- restore team-real prompt evals
- monitor quality, cost, and latency
- expand OCI corpus by real gaps
- add query cache only if needed
- prepare production checklist

Close

This is a practical assistant for faster, evidence-backed OCI architecture reviews.
